

Sergio Castaño Sánchez (serg-cs)

Software Engineering student

Málaga, Spain [GitHub](#) sergiocastanosanchez@icloud.com

// about

Software Engineering student at the University of Málaga. I am interested in system design and architecture: understanding how the different parts of a project work and how they connect.

[#168](#) [#7](#) [#1](#) [and more](#)

2023

Contributions to CNCF Landscape 2, the generator behind landscape.cncf.io.

- CSV export, TAG metadata, and validation of landscape data.
- GitHub Action and reusable workflows to build and deploy landscape sites.

Aug 2026

Each repo gets a stable Linux workspace on macOS so agents and tools share one environment, instead of a disposable container every session. The project stays mounted with explicit persistent state, so the workspace can outlive a single run without leaking tools across projects.

Jul 2026

An installable weather app that turns AEMET forecasts into static files. App and forecast data are built separately so each can update on its own schedule, and served from an S3-compatible bucket.

Rust

PWA

HTML/CSS

grpc-calculator

[GitHub](#)

Mar 2026

A calculator built to practice crossing service and language boundaries, not to compute faster. The UI, HTTP gateway, and compute service stay separate, with a typed contract in the middle so each piece can change on its own.

Svelte

Go

Rust

Jan 2026

A local-first desktop Kanban so tasks stay on the machine and never need an account. The UI talks to a native backend with an on-disk database, which keeps the app fast and private without a server.

React

TypeScript

Tauri

Jun 2025

A job board for students and recent graduates, aimed at entry-level listings that do not assume prior experience. The site is server-rendered as one deployable binary, and new postings go through admin review before they are public.
